

People with knowledge drive business.

G2|B™ Information Access Suite

The Agile Information Access Solution for Today's Complex Data Environments

The Coveo G2B™ Information Access Suite gives knowledge workers an unrivaled ability to obtain a 360-degree view of the information they need to drive business by providing unbiased, secure information access for all documents and structured data stored in file systems, email servers, intranets, enterprise applications, databases, and Web sites. Based on industry standards, offering an award-winning combination of security, accuracy, and unrivaled user experience, the Coveo G2B Information Access Suite presents the best value in the marketplace.

Radically Simpler. Powerful. Agile.

Knowledge workers are often starved of the critical information they need to work better and smarter! Accessing your business critical information is a challenge. Coveo has radically simplified the deployment of search-powered information access solutions so you can unleash the value inside all of your pan-enterprise information NOW! Best of all, our solutions are compatible so you can truly enable unified information access across multiple data silos.

G2|B™ for Email

Your business life is stored in email archives and you are wasting time trying to find stuff? How about split-second access to what you need – including opening archived attachments from your mobile device?

Coveo G2B for Email maximizes the benefits of just-in-time email information access while helping to mitigate the compliance and other risks associated with email. It provides real-time, comprehensive views into email-based information that is often critical in

making business decisions. Imagine access to information locked inside emails and their attachments—whether they're stored within live email servers or archive servers. Now imagine accessing and opening a 4 year old attachment from your PC or mobile device in a split second!

G2|B™ for Intranets

Do you have millions, perhaps billions of documents sitting across platforms such as Documentum, FileNet, SharePoint or others? The true value of a collaboration platform occurs when workers can access what they need within a split-second.

Coveo G2B for Intranets connects people to information from every nook, cranny and corner of your corporate knowledge base—no matter what form or format the information is in. Seamless information access at the speed of modern business through a familiar browsing experience means better-informed people driving better business.

G2B™ for CRM

Got *salesforce.com* or *Siebel for CRM*? Then, your customer calls the help desk and also has a billing issue? Access unified 360° views of customer data within a split-second.

Coveo's *G2B for CRM* makes it simple to find the information you look for most often: biggest pipeline deals by sales rep, sales forecasts, lead and contact information—everything! In fact, you may never have to build another report again. Simply type in what you're looking for, and voila! There's whatever information you need, at the moment you need it.

G2B™ for Multimedia

Thousands of hours of multimedia have limited value if you cannot quickly pinpoint the content you are looking for. Search within audio to access the segment you need within seconds using our patented multimedia search technology.

Coveo's *G2B for Multimedia* accesses hundreds of hours of rich media content with unparalleled precision and ease. Using our patented process of improved speech recognition, it produces searchable transcripts (behind the scenes) that include enterprise-specific spoken words such as proper names, product names, employee names, domain terms, and more. This allows you to search within the audio and video content and navigate to the segment you need within a split-second!

G2B™ for Custom Applications

Ever feel like your need to search and access information across your enterprise might be so challenging that only path to a solution is through "slideware" concepts from a whole collection of enterprise search vendors? Forget it!

G2B for Custom Applications lets you quickly deploy large scale search platforms and navigate massive data silos within a split-second. It is used for a wide range of applications such as searching eCommerce portals, web site search, faceted search applications for business analytics, online directories, and can be embedded within a wide range of hardware or software solutions.

Download in Minutes. Deploy in Hours.

By this time tomorrow, you can be working with information from all across your company data silos. To prove it, you can try *Coveo G2B Information Access* solutions you need right now, and use them free with no obligation. That includes all the "black-belt" level support you may want. You can then continue using your *Coveo* solutions through a simple license activation.

Our customers call this the smartest IT investment they have ever made. We call it the *Coveo G2B Information Access Suite*.

About Coveo Solutions, Inc.

Coveo has radically simplified the delivery and deployment of platform-class Information Access solutions for accessing critical information located anywhere across the enterprise.
